

SOLUTION

- To address the challenges, we developed a cutting-edge Progressive Web App (PWA) using Glide.
- The PWA offered a streamlined and user-friendly registration form for potential clients.
- Clients could easily access the app through web browsers, smartphones, or add it as a bookmark.
- The integration of a Telegram bot ensured real-time updates and notifications for new passenger registrations, facilitating seamless communication.
- The result: within three months of using the app, the entrepreneur's time investment significantly reduced, leading to a tenfold increase in income, and continued organic growth of the client base without any ad costs.
