Summary

Technology leader and systems architect with 18 years across IT leadership, infrastructure, internal systems, automation, and software delivery. Experience spans CTO-style delivery, ERP/CRM and portal builds, and hybrid systems using IBM Domino, low-code platforms, PostgreSQL, and API integrations.

I am usually most useful when the system already exists, but the work around it is messy: part of the process lives in Excel, part in email and chat, access rules have drifted, old backend decisions are undocumented, and users no longer know who owns which step. In those situations I start by mapping what people actually do, where data gets lost, which roles are real, and what can be automated without breaking daily operations.

Recent work is closer to CTO / solution architect delivery: Supabase/PostgreSQL backends, WeWeb/Bubble/Glide, n8n and Make, API integrations, PWAs, Telegram workflows, and AI-assisted delivery. I can speak with business stakeholders in process terms and with developers in terms of schema, API behavior, permissions, platform limits, and rollout risk.

Core Skills

Most of my work starts before there is a clean specification. Someone has a process that half-lives in Excel, email, old databases, access rules, and local habits. I pull that apart with stakeholders, then turn it into something a team can build and users can actually operate: data model, roles, statuses, integrations, reports, permissions, documentation, and support routines.

I can stay hands-on enough to understand backend, database, and API decisions, but I also take responsibility for rollout, training, task structure, small-team leadership, vendor coordination, and the parts of implementation where users find edge cases. The same pattern now applies to AI-assisted delivery: prompts, guardrails, validation checks, schema sync, and review loops instead of casual prompting.

Technical Stack

I am not tied to one single stack. Most recent projects combine several pieces that already exist: a database, a low-code interface, webhooks, spreadsheets, permissions, external APIs, and some manual workaround that has to be removed carefully. The current stack I

use most often includes Supabase, PostgreSQL, SQL, RLS, Auth, Edge Functions, Realtime, WeWeb, Xano, n8n, Make, REST APIs, Postman, JavaScript, Python, Node.js, JSON, and Telegram bots.

The low-code/product side includes WeWeb, Glide, Bubble, Airtable, Figma, Webflow, Astro, PWA architecture, and custom WeWeb/Vue components. I used Airtable actively, including migration into MetaFox and a wrapper-style connection into Supabase. In Glide I built booking, networking, multilingual apps, and integrations with Google Sheets, Supabase, Make, and external APIs. In WeWeb I usually work on more serious client portals and internal interfaces sitting on one backend data model.

For automation, n8n and Make are the tools I reach for most. In n8n I built complex workflows, error/debug loops, workflow-as-function patterns, Google Drive/Sheets to Supabase migration, AI parsing, OpenAI API calls, and hallucination checks through external geocoding/reverse-geocoding requests. In Make I worked with webhooks, routers, social distribution, email, document generation, DocsAutomator, JSON processing, and scenario-cost optimization.

The older enterprise layer is still relevant: IBM/HCL Domino, Lotus Notes, XPages, LotusScript, Lotus SSJS, Lotus (**Formula?**), Java, VBA, XML, Apache POI, Boss-Referent, Lotus Enterprise Integrator, 1C/XML integrations, MySQL, MS SQL, and Microsoft Office OLE. That is not a theoretical list; it came from years of document workflow, reporting, integrations, and internal systems work.

Infrastructure and ITSM experience includes Windows Server, Linux, Ubuntu, CentOS, nginx, Docker, Hyper-V, VMware ESXi, Active Directory, GPO, LDAP, DNS, DHCP, GLPI, Zabbix, SoftEther VPN, Synology NAS, IP PBX/SIP, CCTV, Hikvision, AxxonNext, Octagram, Kaspersky, PlanFix, Odoo, ServiceDesk/HelpDesk, asset inventory, Tawk.to, Yandex Disk, Microsoft Office, LibreOffice, OpenOffice, OnlyOffice, and knowledge-base documentation. External services I have integrated include Telegram Mini Apps, QR code workflows, Yandex Maps API, DataMos.ru, legal entity/INN lookup, weather APIs, Stripe, WordPress/WooCommerce, SendPulse, Bing Translate, fal.ai, and AI image-generation APIs.

Professional Experience

NeedleBit

CTO / Systems Architect
Belgrade, Serbia
Nov 2022 - Present

I run an independent technology practice where projects are rarely just “build an app”. Usually there is an operational problem behind the request: a service team losing time in chats and spreadsheets, a founder trying to see what is happening in the business, or an old tool that has to be replaced without stopping work. I cover architecture, implementation, cleanup, automation, and the first support/adoption loop after launch.

- Delivered CRM, ERP, internal portal, reporting, marketplace, assessment, and field-operations systems for small businesses and startup teams.
- Built across WeWeb, Supabase, Xano, Bubble, Glide, n8n, Make, PostgreSQL, APIs, Telegram integrations, and AI APIs, often combining several of them in one production workflow.
- Reduced client service handling from hours to minutes by replacing manual chat, email, and spreadsheet workflows with structured automation, improving operational turnaround in client-facing processes.

- Supported client revenue growth up to x10-x13 in service-business cases after process restructuring and system rollout.
- Migrated approximately 70,000 historical documents from Google Drive into Supabase in a field-inspection/reporting platform.
- Built dual-interface systems where an internal operations app and a client-facing portal shared the same backend model, instead of drifting into two separate products.
- Designed self-hosted ERP workflows with role-based access, QR equipment access, Telegram Mini App login, and field task tracking.
- Built AI-assisted workflows for image generation, data parsing, prompt debugging, and structured generation pipelines.
- Added engineering discipline around AI-assisted delivery: repository instructions, acceptance criteria, helper layers, SQL workflows, Supabase schema/function synchronization, and database-to-git documentation.

Selected projects: PromptlessPress, MetaFox Strengths Explorer, Exit Lead, Andronyevskaya ERP, Vencer Autismo, Educate Online, QR Cloud, Dobri Visarun, Dobri Tours, Cashdesk Accounting, Serbia Networking App, RuskaJela.

OTUS

Instructor

Remote

Sep 2023 - Dec 2023

- Taught practical topics around Bubble development, Figma/product interface work, AI tools, and international marketplace positioning.
- Converted applied product and low-code delivery knowledge into lessons, examples, and student-facing explanations.

New Business Environment

Implementation Curator / Product Manager

Moscow, Russia

Aug 2022 - Nov 2022

Worked in a commercial automation company building and implementing ERP/CRM systems on PlanFix.

- Audited weak points in the implementation process and post-delivery adoption.
- Improved ERP/CRM implementation methodology and project control practices.
- Analyzed client business processes, usage scenarios, training needs, and delivery handoff issues.
- Helped clarify unclear responsibility zones between managers, implementers, and clients.
- Coached managers on product explanation, adoption logic, and system use.
- Improved project transparency and the structure of implementation communication.

Directorate of Cultural Centers of Moscow

Senior Manager / IT Architect / Analyst / Developer

Moscow, Russia

Jan 2017 - May 2023

This was a hybrid role: part architect, part developer, part analyst, part internal product owner. The system served Moscow's cultural sector, so technical changes also meant institutional communication, training, access rules, reporting obligations, and support for

people in subordinate organizations who had to use the system in real work.

- Partnered with IT directors and heads of IT across 100+ subordinate cultural institutions to rebuild a legacy IBM Domino data-collection system into a web-based information system with modular architecture.
- Rebuilt a legacy IBM Domino data-collection system into a web-based information system with modular architecture while keeping reporting work alive.
- Designed report generators, field generators, export constructors, filters, access rules, role-based controls, and reusable field/snippet generation tools for faster change delivery.
- Replaced a 5-hour, single-user export workflow with web-based report generation that usually completed in 1.5 seconds to 1.5 minutes for authorized users across institutions.
- Built an interactive object map using Yandex Maps API, JSON/GeoJSON-style data, and public institutional data from the information system.
- Migrated IBM Domino infrastructure from Windows to CentOS with nginx reverse proxy.
- Improved security through web authentication changes and achieved an A+ SSL rating in the nginx reverse-proxy setup.
- Identified security risks and structural issues in the legacy system and proposed remediation steps.
- Created practical rules for access control and system modifications, because informal changes had become a real operational risk.
- Moved support from phone and email to Tawk.to, making user questions and incidents easier to track.
- Removed the system portal from Google, Bitdefender, Quttera, and Sangfor blocklists after phishing/malware false positives.
- Prepared technical requirements for sector-level IT projects and represented technical needs in meetings with Moscow authorities.
- Trained users through consultations and webinars and supported adoption across departments and subordinate institutions.
- Hired, onboarded, and mentored employees and interns; prepared probation plans and task structures.

Technologies: IBM/HCL Domino, Lotus Notes, XPages, JavaScript, Java, CSS, HTML, XML, Apache POI, CentOS, nginx, Yandex Maps API.

ZIL Cultural Center

Head of IT / CIO

Moscow, Russia

Mar 2020 - Jun 2022

Led IT in a large cultural center where the work mixed normal infrastructure, old inherited decisions, urgent support, security, vendors, users, and physical systems such as CCTV and access control. A lot of the job was bringing service discipline and documentation back into an environment that still had to run every day.

- Managed an environment of about 200 PCs, 7 servers, roughly 20 virtual machines, CCTV, telephony, file services, and access-related infrastructure across IT operations and support.
- Managed 5 IT staff and 2 installation engineers.
- Moved 100+ employees to remote work during COVID using SoftEther VPN and Yandex Disk without stopping core operations.
- Launched GLPI HelpDesk with automated inventory for IT and seven additional technical support services.
- Integrated GLPI with Active Directory and automatic asset inventory.

- Introduced Active Directory, GPOs, centralized access management, and security policies.
- Used Group Policy to deploy browsers, required software, workstation settings, restrictions, and security policies.
- Connected file access, Synology resources, GLPI assets, Octagram access control, MS SQL-backed internal databases, employee accounts, and offboarding into a centralized domain-based model.
- Rolled out an integrated phonebook with maps of buildings, PCs, and people.
- Integrated the local account model with the Moscow Department of Culture directory infrastructure.
- Reorganized the IT department, documentation, responsibilities, request handling, and internal service discipline, including who owned which recurring issues.
- Audited information security and personal-data handling, then prepared and implemented remediation steps.
- Trained employees on basic information security, account discipline, remote-work safety, and internal-system usage.
- Restored documentation for networks, communications, infrastructure, and department procedures.
- Prepared technical specifications and supervised third-party development of a new website.
- Adapted the website for mobile use and introduced a Progressive Web App approach.
- Researched ticketing, CRM, ERP, ServiceDesk, and automation systems; prepared procurement and pilot materials.
- Modernized video surveillance, computer fleet, storage, and parts of the server environment.
- Rebuilt and stabilized the Hikvision CCTV environment, including disk replacement, RAID/mirroring, and recovery behavior after connection loss.
- Monitored critical infrastructure through Zabbix, including switches, cameras, Octagram, Synology, and other core services.
- Conducted physical inventory and cleaned up obsolete warehouse equipment.

Technologies: Windows Server 2012 R2, Windows 7-10, CentOS, Ubuntu, Hyper-V, Hikvision, AxxonNext, GLPI, Zabbix, NethServer, Synology, Active Directory, GPO, Octagram, MS SQL, Kaspersky, SoftEther VPN, IBM/HCL Domino, Odoo, Docker.

Moscow Social Development Agency

Deputy Head of Digital Development and IT / Acting Head of IT
Moscow, Russia
Sep 2019 - Mar 2020

Joined a newly created organization and helped build its IT function from the ground up.

- Designed the initial IT architecture for workstations, servers, Ethernet, Wi-Fi, SIP telephony, and business systems.
- Selected hardware and software for procurement, including PCs, MFPs, servers, and networking equipment.
- Led HelpDesk implementation based on GLPI with automated inventory.
- Built a phone directory with employee map display and Active Directory synchronization.
- Prepared department documentation, regulations, role descriptions, and internal operating rules.
- Audited infrastructure and prepared a plan for process and security improvements.
- Managed hardware movement, licensing, access accounts, Active Directory, telephony, and mail-domain processes.
- Participated in acceptance commissions for agency projects, including Healthy Moscow and My Social Center.

Beluga Group

Lotus / IBM Domino Developer
Moscow, Russia
Nov 2016 - Mar 2017

- Supported and developed an internal IBM Domino document-management system used by more than 3,000 users.
- Worked as third-line support for workflow and Domino application issues.
- Processed a backlog of enhancement requests accumulated from earlier periods.
- Unified the visual style of internal Domino databases.

Settlement and Savings Bank

Lead Software Developer / Systems Architect
Moscow, Russia
Jan 2013 - Sep 2015

Built an internal electronic document management system in a banking environment.

- Worked with bank leadership and department heads to map document types, routes, registration rules, ownership, statuses, and approval paths.
- Converted informal document movement into technical requirements for automation.
- Reviewed existing Russian DMS/EDMS products and prepared implementation assessments.
- Designed and built an internal DMS from scratch on IBM Lotus Domino using object-oriented principles.
- Implemented XML integration with 1C, including employee data export and template-based data exchange.
- Prepared requirements for the 1C developer during integration with HR structures.
- Supervised another developer, trained users, tested the system, and rolled it out to production.
- Made document-flow bottlenecks visible to leadership by turning opaque routing into a measurable workflow.

Technologies: IBM Lotus Domino, Lotus Notes, XPages, JavaScript, CSS, HTML, XML, Sametime, 1C integration.

I.T. Information Technology

Lotus Notes Specialist
Moscow, Russia
Jan 2011 - Apr 2012

- Developed and maintained IBM Domino / Lotus Notes document-management systems in a systems-integration environment.
- Introduced XPages technology into the company for the first time.
- Rewrote the core Boss-Referent library in JavaScript / SSJS to support web interfaces.
- Modified Boss-Referent for web use and added new modules and databases.
- Fixed system and UI issues in Domino applications.
- Trained new employees on the internal Lotus Notes workflow system.

Technologies: IBM Domino, Lotus Notes, Boss-Referent, LEI, XPages, Lotus SSJS, JavaScript, CSS, HTML.

Freelance / Private Practice

Independent Technical Specialist
Moscow, Russia
Jan 2009 - Jan 2011

- Built and maintained websites on CMS platforms.
- Deployed and supported private World of Warcraft and Lineage servers.
- Installed and supported Ubuntu desktop/server environments and web-server software.
- Automated database updates from SVN repositories into MySQL using Bash scripts.
- Configured automatic backups to cloud storage.
- Built and repaired PCs, installed operating systems and applications, and handled user support.

Domodedovo Airport

Junior Lotus Notes Developer
Moscow, Russia
Sep 2008 - Sep 2009

- Selected through an internal training and hiring process from a group of 12 candidates.
- Developed, configured, modernized, tested, and supported Lotus Notes / Domino document workflow applications.
- Built service applications and agents.
- Integrated Lotus applications with Microsoft Office and other software through OLE.
- Prepared project documentation and supported users.
- Worked with Service Desk and testers on enterprise workflow issues.

Education

Bachelor in Management, Small Business Management specialization, National Institute of Business, Moscow, 2019

Professional retraining: Manager in Information Technologies, Humanities Institute, Moscow, 2019

Applied Informatics in Economics / Applied Economics in Informatics coursework, Humanities Institute, Moscow, 2011-2019; later transferred before graduation
Accounting and Finance background, College of Commerce and Banking No. 6, Moscow, 2006-2008

Professional Development

- Java SE10 fundamentals, Specialist Training Center, 2018
- ITIL and DevOps service-management training, Specialist Training Center, 2018
- IT management training, Specialist Training Center, 2018
- Zero-code / western-market product building, Zerocoder University, 2022
- PlanFix implementation courses, 2022
- Negotiation and pressure-management training, Igor Ryzov Academy, 2020-2021

Languages

Russian: native
English: fluent
Serbian: fluent

Additional Experience

- Co-organized the Byt Dobru music festival in 2014-2015 and managed a market/fair area with 3 volunteers.
- Organized concerts for the band Polynya from 2017 to 2020.
- Experience with event organization, promotion, training, volunteer coordination, and public-facing communication.

Skills

Architecture, Infrastructure, Automation, Databases, Low-Code Platforms, APIs/Integrations, ITSM, and Leadership. Include the most target-relevant terms already present in the CV: IBM Domino, XPages, nginx, PostgreSQL, Supabase, Docker, Active Directory, GLPI, Zabbix, n8n, Make, Bubble, WeWeb, API integrations, and ERP/CRM.
